Assessment and screening

Acute Care

- Follow AHS Directive [Communicable Disease \(Respiratory Including COVID-19 and ILI\) Screening, Assessment, and Monitoring In Acute Care](#) and [Implementation Strategy: Patient Screening and Symptom Assessment & Monitoring Recommendations for COVID-19](#).
- The acute care testing and additional precautions strategy is summarized in [AHS Acute Care COVID-19 Expanded Testing Algorithm](#).
- All patients (Admitted Inpatients, Emergency Department [ED], Surgery, Obstetrics, Inter-Facility Transfers, Direct Admissions) except neonates are to be assessed initially for symptoms and risk factors associated with respiratory communicable disease using [Communicable Disease \(Respiratory\) Initial Screening Form #21615](#).
- Ongoing assessment of admitted patients is to be completed using [COVID-19 Symptom Identification and Monitoring Form #21616](#).

Ambulatory Care (stand alone or part of an Acute Care site)

- The ambulatory care testing and additional precautions strategy is summarized in [AHS COVID-19 Assessment Algorithm for All Ambulatory Settings](#)
- Patients in Ambulatory Care and Outpatient Department [OPD], are to be assessed using the [Ambulatory Communicable Disease Screening Form #21666](#).
- For further information see [IPC Resources for Ambulatory Care Clinics \(including Laboratory Collection sites\)](#)

Continuing Care

- See [Protecting Residents at Congregate Care Facilities](#) (Government of Alberta).

Primary Care

- Guidance document: [Viral Respiratory Illness Guidance for Community Providers](#)
- See [PPE Table for Community Providers/Clinics during COVID-19 \(Non-virtual appointments\)](#) for personal protective equipment recommendations.

Severely Immunocompromised Patients

- For the purposes of COVID-19 IPC-related patient management, special consideration is given to a subset of immunocompromised patients who are considered "[severely immunocompromised](#)."
- Severely immunocompromised patients may produce replication-competent SARS-CoV-2 virus for prolonged periods beyond 21 days after COVID-19 symptom onset (or after first positive COVID-19 test if asymptomatic throughout).

Updated	2021-06-15
Revised	2023-04-06

COVID-19 vaccination

- Regardless of patient or HCW COVID-19 vaccination status, all initial and ongoing symptom and risk factor assessments should be performed.
- Vaccinate eligible patients as soon as possible based on Alberta Health eligibility criteria.
- Many common post-vaccine symptoms are the same as COVID-19 symptoms.
 - Less than 10% of vaccinated individuals develop respiratory/core or GI symptoms post-vaccine. [See [NACI Recommendations on the Use of COVID-19 Vaccines.](#)]
 - Continue to monitor patients for new symptoms using [COVID-19 Inpatient Symptom Identification and Monitoring Form #21616.](#)
- If patient develops post-vaccine symptoms that are the same as COVID-19 symptoms:
 - **Core respiratory or GI symptoms**
 - Place patient/resident on [Modified Respiratory Precautions](#)
 - Test for COVID-19
 - Use [Form #21624](#) to discontinue [Modified Respiratory Precautions](#)
 - **Expanded symptoms**
 - Use routine practices
 - Test for COVID-19

Hand hygiene

- Perform [hand hygiene](#) using alcohol-based hand rub (ABHR) or soap and water as described in [Routine Practices.](#)
- Updates on ABHR products, substitutions and supply management are available [here.](#)
- Educate patients and DFSPs/visitors about how and when to use [hand hygiene](#) products.

Continuous facial PPE (procedure/surgical mask or N95 respirator PLUS eye protection)

- AHS People are required to continuously mask in an AHS facility or AHS setting when they are in an area where they may come into contact with, or that is accessible to, patients or designated family/support persons (e.g., patient care areas, elevators/staircases/hallways, common areas, gift shops, cafeterias.) See [Directive: Use of Masks During COVID-19.](#)
- Wearing a mask is optional when in an area where there is no contact with, or that is not accessible to, patients or designated family/support persons.
- As per the [Joint Statement:](#)
 - In some areas, fit tested N95 respirators are to be used as the default for continuous masking, e.g., Emergency Department, open space critical care areas, i.e., bedspaces without doors or walls, other open space care areas with a high frequency of AGMPs, COVID-designated units.
 - There may be situations where a healthcare worker, based upon their [IPC RA](#) or their assessment of all known and foreseeable risks and hazards, may choose to wear a medical mask instead of an N95 respirator.
 - See area-specific PPE Tables as applicable.
- When using an N95 respirator for continuous masking, ensure model/size is chosen based on current valid fit-testing (i.e., within the past 2 years).
- Use a well-fitting procedure/surgical mask if a fit tested N95 respirator is not available.
- A seal check alone is not adequate for an N95 respirator.
- [Continuous eye protection:](#)
 - Continuous eye protection is recommended in settings where frequent or unanticipated exposures to COVID-19 may occur or in settings that are initial points of contacts for patients and/or the public.

Version	Date (YYYY-MM-DD)
Created	2020-03-13
Updated	2021-06-15
Revised	2023-04-06

- These areas include (but may not be limited to) screening areas, EMS, ED and Urgent Care, Assessment Centres, COVID Units and Outbreak Units.
- Use eye protection as part of [Modified Respiratory Precautions](#) or [Contact and Droplet Precautions](#), or as directed by an [IPC RA](#).
- Eye protection can be face shield, goggles, mask and visor combination, or personal safety glasses. **Prescription eyeglasses alone are not adequate.** See [Use and Reuse of Eye Protection during the COVID-19 Pandemic](#) for more information.
- Don facial PPE using clean hands, putting mask/respirator on first.
- **Consider facial PPE to be a single unit of protection; always don/doff both at the same time.**
- Change/discard facial PPE if it becomes contaminated, wet or soiled, as directed by additional precaution signs or unit/area specific PPE recommendations.
- Eye protection will be changed/discarded or disinfected.
- When discarding or disinfecting eye protection, mask/respirator will be discarded/changed at the same time.
 - If wearing reusable eye protection, clean and disinfect every time mask/respirator is changed, replaced or removed.
 - Review [Use and Reuse of Eye Protection during the COVID-19 Pandemic](#) for how to clean and disinfect reusable eye protection.
 - For AGMP, remove procedure/surgical mask and eye protection, perform hand hygiene then don fit tested N95 respirator and new or clean eye protection.
 - N95 respirators and eye protection must be removed when leaving the room.
 - When fit tested N95 respirators are worn for continuous masking, they must be changed following continuous masking recommendations.
 - When using an N95 respirator for continuous masking, there is no need to don a new one prior to entering the AGMP room.
- Facial PPE maybe removed for eating and drinking in spaces 2m apart from patients, coworkers or DFSPs/visitors. Refer to [Staff COVID-19 Tips: Eating and Drinking at Work, Personal Clothing, Cleaning Devices and Accessories](#).

Continuous masking

- Follow [Directive: Use of Masks During COVID-19 Directive](#) and [Continuous Masking Directive FAQ](#) or [Guidelines for Continuous Mask and Eye Protection Use in Home Care and Congregate Living Settings](#) for use of N95 respirator/ procedure or surgical masks by all HCWs who work in any patient/client/resident care setting.
- **General Principles:**
 - [For procedure/surgical mask](#): fully open mask to cover from nose to below chin, ensure snug fit
 - [For N95 respirator](#): choose correct model/size based on fit testing.
 - Wear mask/respirator so that it covers the nose, mouth and chin; do not wear below nose, below chin, on forehead or to the side.
 - Avoid touching the mask/respirator or the front of your face under the mask/respirator. If this happens, doff the mask/respirator, perform hand hygiene, and replace with a new one.
 - Avoid eating or drinking while continuously wearing a mask/respirator. Use a new mask/respirator after breaks.
 - Discard mask/respirator if it becomes wet/moist or soiled and replace with a new one.
 - Replace mask/respirator after using the toilet or after assisting a patient to use the toilet.
 - Masks/respirators are single use; do not reuse or store in uniform/scrubs or clothing pockets.
 - Use a single mask or respirator; **do not double mask in any combination.**

Version	Date (YYYY-MM-DD)

Personal protective equipment (PPE): Gowns, gloves and facial protection

PPE Considerations

- Wear new PPE to enter patient room or bedspace.
- However, if wearing continuous facial protection, same facial protection can be worn into the patient's room or bedspace.
- HCWs are to wear fit tested N95 respirator, eye/face protection, gown, gloves even if the patient on [Modified Respiratory Precautions](#) is wearing a mask.
 - A procedure/surgical mask may be used instead of an N95 respirator based on the [IPC RA](#) performed by the healthcare worker.
 - See [Joint Statement](#) for more information.
- Doubling up of any PPE, i.e., double masking with any combination of respirator and mask, double gloving, double gowning, and/or double eye protection is not required or recommended.
 - Doubling up of PPE increases the risk of PPE errors and of self-contamination.
- Remove soiled PPE as soon as possible.
- Do not wear gown and/or gloves outside a patient room or bedspace unless transporting contaminated items.
- Refer to the [AHS Donning and Doffing PPE posters](#) for details on careful removal and disposal of PPE. Do not reuse or disinfect single-use PPE. Reusable PPE must be cleaned before reuse (launder gowns, disinfect eye protection).
- Effective and appropriate use of PPE keep **healthcare worker uniforms and clothing** clean. If healthcare workers change clothing before leaving healthcare facility, take soiled clothing home in a bag. Soiled uniforms/clothing do not need any special handling in the laundry. Refer to [Staff COVID-19 Tips: Eating and Drinking at Work, Personal Clothing, Cleaning Devices and Accessories](#).
- Further information and resources on PPE can be found [here](#) and [Joint Statement](#).

Gloves

Note: Gloves do not replace the need for hand hygiene. Instead of wearing gloves continuously, [perform hand hygiene](#) frequently. Gloves cannot be cleaned and become contaminated very quickly.

- Gloves should be used when handling disinfectants or before contact with body fluids.
- Gloves are single use. Use only once, discard immediately after use.
- Gloves are used at the point-of-care. They should not be worn continuously.
- Gloves should not be reused or stored in uniform/scrubs or clothing pockets.
- Change gloves between care activities for the same patient, e.g., when moving from a contaminated body site to a clean body site. Sterile gloves are for sterile procedures.
- For more detailed information on glove use see [Glove Use and Selection: Best Practice Recommendations](#) or [Proper Glove Use as part of Personal Protective Equipment](#).

Version	Date (YYYY-MM-DD)
Created	2020-03-13
Updated	2021-06-15
Revised	2023-04-06

Aerosol Generating Medical Procedures (AGMP)

- Use a fit tested N95 respirator if an [Aerosol Generating Medical Procedure](#) is under way or anticipated for a patient on [Modified Respiratory Precautions](#).
- AGMPs are ideally performed in airborne isolation rooms (AIRs) if available; however, placement in AIRs is not mandatory. AIRs are limited, and there has not been well-documented transmission by AGMPs when healthcare workers are using appropriate PPE.
 - If it is anticipated that a patient may require an AGMP, the patient should be placed in a private room with the door closed.
 - Place patient in a private room with hard walls and a door if not already done.
 - Close the door to reduce traffic in the room; this may not be possible for some patients, e.g., continuous AGMP.
 - If walled room is not available or possible, ensure patient is in a curtained area/bedspace and curtains are pulled closed.
- Ensure [AGMP sign](#) is placed on the door or curtain.
- Ask non-essential healthcare workers to leave the room.
- For DFSP/visitors:
 - Episodic/non-continuous AGMP: ask DFSP/visitor to leave the room.
 - Continuous AGMP: [AHS Provincial Guidance for Designated Family/Support Person Access for Suspected or Confirmed COVID-19 Patients on a Continuous AGMP](#)
- Currently there is no recommended settle time post-AGMP.

Fit tested N95 respirators and eye protection are used when AGMPs are performed or when working with intubated patients. See the list of [AGMP](#).

- All staff and physicians require fit testing for an N95 respirator.
- Perform [hand hygiene](#) before putting on and immediately after taking off N95 respirator.
- When donning an N95 respirator:
 - put on the respirator before entering the patient's room;
 - mould the metal bar over the nose;
 - ensure an airtight seal on the face, over top of the nose and under the chin;
 - don eye protection after N95 respirator.
- If the N95 respirator becomes wet/moist or visibly soiled, leave the room, doff the N95 respirator currently being worn, perform hand hygiene, and don a new one.
- Remove the N95 respirator after leaving the patient's room. [Doffing an N95 respirator](#) is a deliberate process and should be done carefully to prevent self-contamination.
- Do not wear an N95 respirator around the neck.

Refer to the [AHS Donning and Doffing PPE posters](#) for details on careful removal and disposal of N95 respirators. Do not reuse or disinfect single-use PPE. Reusable PPE must be cleaned before reuse (launder gowns, disinfect eye protection).

Handling patient care items and equipment (including charts and electronics)

- Use disposable patient equipment when possible.
- Dedicate reusable equipment for a single patient use only until discharge.
- If re-usable equipment cannot be dedicated for a single patient use, clean and disinfect between patients. [Handling, Cleaning & Disinfecting Mobile DI Devices](#) and [Stethoscope Use for Patients on Modified Respiratory Precautions](#).
- All rooms should contain a dedicated linen bag; double bag only if leaking.
- Do not share items that cannot be cleaned and disinfected.

Version	Date (YYYY-MM-DD)
Created	2020-03-13
Updated	2021-06-15
Revised	2023-04-06

- For shared computers, laptops and tablets, follow recommendations for the [Use of Mobile Electronic Devices when Patients are on Contact and Droplet Precautions including COVID-19](#).
- Used meal trays and dishes do not require special handling. Disposable dishes and utensils are not required.
- Special handling of linen or waste is not required; general waste from patients on Additional Precautions is not biomedical waste.
 - [Tip Sheet for Continuing Care Residents Families and Visitors during COVID-19 Pandemic](#)
 - [Tip Sheet for Acute Care Patients and Designated Family/Supports during COVID-19 Pandemic](#)
- Paper is not a means of transmission. Handle all paper with clean hands; clean any shared items (like chart binders, pens or binders) with a low-level disinfectant wipe.

Patient ambulation outside room, bedspace or transfer

- Patients should leave the room or bedspace for essential purposes only. Exceptions require IPC consultation.
- Before departure, notify the receiving area that the patient requires [Modified Respiratory Precautions](#).
- Follow [Intra-Facility Patient Transport Checklist for Patients on Additional Precautions Form # 21648](#) to determine PPE required during transport
- Use pre-determined transport routes to minimize exposure for healthcare workers, other patients and DFSP/visitors.
- Before patients leave their room or bedspace, educate or assist them to:
 - perform [hand hygiene](#);
 - put on clean clothing or hospital gown/housecoat;
 - ensure dressings and incontinence products contain any drainage;
 - put on a procedure/surgical mask;
 - consider alternate strategies for patients who cannot tolerate a mask, e.g., neonates, infants, toddlers; cuddle with care provider;
 - for patients with tracheostomy, cover site with surgical mask (with ties);
 - discuss if an escort is needed for the patient.
- Patients who are transferred to Continuing Care do not require a COVID-19 test and are not required to be placed on isolation/additional precautions upon transfer. Some exceptions may apply for a specific outbreak situation; this will be determined by the acute care outbreak management team including Public Health.

Environmental cleaning

- Routine Practices, which include cleaning and disinfection of surfaces, is important to control the spread of COVID-19.
- Cleaning & disinfection are a shared responsibility of all healthcare workers. Consider assigning designated staff to complete enhanced environmental cleaning.
- AHS-provided disinfectant products are effective against COVID-19. High-touch surfaces, i.e., those which are frequently touched are most likely to be contaminated.
- Any high-touch surfaces that are visibly soiled should be immediately cleaned and disinfected.
- Remove unnecessary curtains from patient areas.
- Inpatient areas for COVID-19 patients: apply discharge/transfer isolation cleaning protocol including changing curtains on discharge/transfer.
- Emergency Department (ED), Urgent Care Centres (UCC) and designated COVID-19 units: apply “Enhanced Environmental Cleaning in Emergency Departments, UCC and Designated COVID-19 Units” - document available on Insite.
