## COVID-19 Patient Management

### Assessment and Screening
- All patients (Admitted Inpatients, ED, OPD, Surgery, Obstetrics, Inter-Facility Transfers, Direct Admissions) are to be assessed initially for symptoms and risk factors associated with respiratory communicable disease using Form 21615 [Communicable Disease (Respiratory) Initial Screening form](https://www.ahs.ca). Patients transferred to Continuing Care are to be assessed using Client Admission Screening Tool.
- The initial assessment will then inform the use of [AHS Acute Care COVID-19 Expanded Testing Algorithm](https://www.ahs.ca). The [AHS Acute Care COVID-19 Expanded Testing Questions](https://www.ahs.ca) is available as a guide to the algorithm.
- The AHS Acute Care COVID-19 Expanded Testing Algorithm will provide direction on testing and additional precautions.
- Ongoing assessment of admitted patients is to be completed using Form 21616 [COVID-19 Symptom Identification and Monitoring](https://www.ahs.ca).
- COVID-19 Continuing Care Health Assessment Screening Tool is available on Continuing Care Connections for Continuing Care residents.

### Discontinuation of additional precautions
- For all patients on additional precautions for COVID-19 use Form 21624 [Discontinuation of Contact and Droplet Precautions for Suspected or Confirmed COVID-19](https://www.ahs.ca).

## Medical Officer of Health Notification

MOH will be notified by Alberta Precision Lab (APL) of presumptive and confirmed positive results. Contact tracing and follow-up will be guided by AHS Zone Public Health.
- [AHS Updates](https://www.ahs.ca)

## Laboratory Testing

- Procedure/surgical mask with facial protection is to be worn when collecting a nasopharyngeal or throat swab for COVID-19 testing in an asymptomatic patient.
- Procedure/surgical mask with facial protection and gown is to be worn when collecting a nasopharyngeal or throat swab for COVID-19 testing in a symptomatic patient.
- Refer to [lab bulletin](https://www.ahs.ca) for testing, specimen handling and notification for laboratory testing.
- Alberta Precision Laboratories will coordinate testing requests.
- Separate requisitions are required for COVID-19 and Respiratory Pathogen Panel (RPP) or gastrointestinal (GI) communicable disease testing. [COVID-19 Testing Changes](https://www.ahs.ca).
### Accommodation
- When determined by **AHS Acute Care COVID-19 Expanded Testing Algorithm** or other assessment form, place patient in a single room and implement **Contact and Droplet Precautions**.
  - Single room with hard walls and door – contact Infection Prevention and Control if not available.
    - Follow **IPC Recommendations for Cohorting Inpatients on Additional Precautions in Acute Care Facilities** after admission.
  - For **Aerosol Generating Medical Procedures (AGMP)**, see below.
- **Contact and Droplet Precautions sign** visible on entry to room or bedspace.

### Asymptomatic Patients (self-isolating prior to admission)
**Emergency and Inpatient** (includes residents admitted from congregate living sites with COVID-19 outbreak).
- As quickly as possible – place patient in a single room and implement **Contact and Droplet Precautions** + **Routine Practices**.
- All other recommendations apply.

### Outpatient / Ambulatory Care departments patients
- Follow **IPC Resources for Resuming Ambulatory Care Clinics during COVID-19 Pandemic**;
- Use Form 21615 for screening **Communicable Disease (Respiratory) Initial Screening form**.

### Healthcare providers
- **Routine Practices**
  - Refer to **WHS FAQ** for any staff concerns.

### Hand Hygiene
- Perform **hand hygiene** using alcohol-based hand rub (ABHR) or soap and water as described in **Routine Practices**.
  - Educate patients and visitors about how and when to use **hand hygiene** products.

### Continuous Masking
- Follow **Continuous Masking in Healthcare Settings** or **Guidelines for Continuous Masking in Home Care and Congregate Living Settings** for use of procedure masks by all healthcare workers (HCW) who work in patient care areas in AHS and community settings.
  - **Do**
    - fully open mask to cover from nose to below chin;
    - replace mask after using the toilet or assisting a patient to use the toilet;
    - discard mask if it becomes wet or soiled and replace with a new one.
  - **Do not**
    - eat or drink while wearing a mask – replace with a new one if required;
    - touch the mask front of your face under the mask – replace with a new one if required;
    - wear mask below nose, below chin, on forehead or to the side;
    - reuse masks;
    - store in uniform, scrub or clothing pockets.
Personal Protective Equipment (PPE): Gowns, Gloves and Facial Protection

- Wear new PPE to enter patient room or bedspace. Healthcare workers are to wear contact and droplet PPE even if the patient is wearing a mask.
- Do not wear PPE outside a patient room or bedspace unless transporting contaminated items.
- Remove soiled PPE as soon as possible.
- Gloves are single-use. Use only once, then dispose of immediately after use.
- Change gloves between care activities for the same patient (e.g., when moving from a contaminated body site to a clean body site). Sterile gloves are for sterile procedures.
- For more detailed information on glove use see Glove Use and Selection: IPC Best Practice Guidelines or Proper Glove Use as part of Personal Protective Equipment.
- Prescription glasses do not meet Workplace Health and Safety regulations for eye protection.
- Proper wearing of masks includes:
  - ensuring a snug fit over the nose and under the chin;
  - discard mask when it becomes wet/moist or soiled and replace with a new one.
- Refer to the AHS Donning and Doffing PPE posters for details on careful removal and disposal of PPE. Do not reuse or disinfect single-use PPE. Reusable PPE must be cleaned before reuse (launder gowns, disinfect eye protection).

Effective and appropriate use of PPE keeps staff uniforms and clothing clean. If staff change clothing before leaving healthcare facility take soiled clothing home in a bag. Soiled uniforms/clothing do not need any special handling in the laundry. Refer to Staff Tips: COVID-19 Personal Clothing and Cleaning Surfaces.

- Further information and resources on PPE can be found here and PPE Agreement – Joint Statement.
Aerosol Generating Medical Procedures (AGMP)

- If Aerosol Generating Medical Procedures are performed, replace the medical mask with a fit-tested N95 respirator.
- Place patient in a private room with hard walls and a door; close the door to reduce traffic in the room.
- Ask visitors and non-essential staff to leave the room.
- If available within the care unit, place patient in airborne isolation room (AIR); transport of patient to access AIR is not advised.
- There is no settle time required after AGMP is complete.

N95 Respirators & Eye Protection use ONLY when Aerosol Generating Medical Procedures are performed. See the list of AGMP.

- All staff and physicians require fit-testing for an N95 respirator.
- Perform hand hygiene before putting on and immediately after taking off N95 respirator.
- Proper wearing of an N95 respirator includes:
  - putting on the respirator before entering the patient’s room;
  - moulding the metal bar over the nose;
  - ensuring an airtight seal on the face, over top of the nose and under the chin;
  - donning eye protection after N95 for AGMP;
  - leaving the room and changing the respirator when it becomes moist;
  - removing the respirator after leaving the patient’s room by touching elastic only;
  - not wearing respirator around the neck.

Refer to the AHS Donning and Doffing PPE posters for details on careful removal and disposal of N95 respirators. Do not reuse or disinfect single-use PPE. Reusable PPE must be cleaned before reuse (launder gowns, disinfect eye protection).

Handling Patient Care Items and Equipment (including charts and electronics)

- Use disposable patient equipment when possible.
- Dedicate re-useable equipment for a single patient use only until discharge.
- If reusable equipment cannot be dedicated for a single patient use, clean and disinfect it between patients.
  - Handling, Cleaning & Disinfecting Mobile DI Devices and Stethoscope Use for Patients on Contact & Droplet Precautions.
- Additional precaution rooms should contain a dedicated linen bag; double bag only if leaking.
- Do not share items that cannot be cleaned and disinfected.
- For shared computers, laptops and tablets, follow Recommendations for Using Mobile & Electronic Devices for Contact & Droplet Precautions Including COVID-19.
- Used meal trays and dishes do not require special handling. Disposable dishes and utensils are not required.
- Special handling of linen or waste is not required; general waste from patients on additional precautions is not biomedical waste. Tip Sheet for Continuing Care Residents Families and Visitors during COVID-19 Pandemic.
- Papers are not means of transmission. Handle all paper with clean hands, clean any shared items (like chart binders, pens or binders) with a low-level disinfectant wipe.
### Patient Ambulation Outside Room, Bedspace or Transfer

- Patients should leave the room or bedspace for **essential purposes only**, exceptions require IPC consultation.
- Follow Form 21628 Intra-Facility Patient Transport Checklist for Patients on Additional Precautions to determine PPE required during transport.
- Use predetermined transport routes to minimize exposure for staff, other patients, and visitors.
- Before patients leave their room, educate or assist them to:
  - perform **hand hygiene**;
  - put on clean clothing or hospital gown/housecoat;
  - ensure dressings and incontinence products contain drainage;
  - put on a procedure/surgical mask. Consider alternate strategies for patients who cannot tolerate a mask:
    - e.g., neonates, infants, toddlers: cuddle with care provider.
  - Notify the receiving area, before departure, of the need for Contact and Droplet Precautions.

Inter-facility transfers of patients to Continuing Care are required to follow current Chief Medical Officer of Health Orders.

### Environmental Cleaning

- Cleaning & disinfection are a shared responsibility by both healthcare workers and Environmental Services. Consider assigning designated staff to complete enhanced environmental cleaning.
- The “Enhanced Environmental Cleaning during COVID-19” document is available on Insite.
- Routine practices, which include cleaning and disinfection of surfaces, is important to control the spread of COVID-19.
- AHS provided disinfectant products are effective against COVID-19. High-touch surfaces, those which are frequently touched, are most likely to be contaminated.
- Any high-touch surfaces that are visibly soiled should be immediately cleaned and disinfected.
- Remove curtains that are not necessary from patient areas.
- Inpatient areas for COVID-19 patients, apply discharge/transfer isolation cleaning protocol including changing curtains on discharge/transfer.
- In the ED, UCC and designated COVID-19 units apply “Enhanced Environmental Cleaning during COVID-19”-document available on Insite.
- Additional precaution signs should not be removed until both patient’s personal hygiene and environmental cleaning have been completed.

### Visitors

- AHS has restrictions on visitors in healthcare facilities; further information can be found here.
- **Visitor Guidance - printable version**
- When considering visiting congregate living sites, Information for People Visiting Residents & Patients will minimize risk to the residents.
- Facilities will have a screener greet each visitor to conduct the health screening and verify if the visitor is authorized to attend following the restrictions.

### Essential support persons

- Are to be assessed for symptoms and risk factors associated with respiratory communicable using Form 21615. Communicable Disease (Respiratory) Initial Screening form to determine if they are well enough to attend or stay with patients accessing health services.
