However, children and adolescents on long-term salicylate therapy should be considered for immunization with close subsequent monitoring. Medical consultation is recommended before proceeding with immunization in children on salicylate therapy.</li> <li>• Children with ALL in remission should have maintenance chemotherapy withheld 1 week before and 1 week following immunization. Medical consultation is recommended before proceeding with immunization.</li> <li>• Individuals taking long-term antiviral therapy should discontinue these drugs (e.g., acyclovir, valacyclovir or famciclovir) at least 24 hours before administration of varicella vaccine and up to 14 days after immunization. Medical consultation is recommended before proceeding with immunization.</li> <li>• If the vaccine recipient develops a varicella-like rash, it should be covered when possible; when not possible, direct contact with susceptible high-risk</li> </ul>	

	<b>Varilrix® (Not Currently Available)</b>	<b>Varivax® III</b>
	individuals (non-immune pregnant women, immunocompromised individuals, newborn infants of mothers without documented history of disease or negative serology) should be avoided for the duration of the rash.	
<b>Possible Reactions</b>	<p><b>Common:</b></p> <ul style="list-style-type: none"> <li>• Pain, redness, swelling, pruritus, hematoma, induration, stiffness, rash/varicella-like rash and numbness at injection site</li> <li>• Fever</li> <li>• Varicella-like rash usually 5-26 days following immunization</li> <li>• Rash</li> </ul> <p><b>Uncommon:</b></p> <ul style="list-style-type: none"> <li>• Lymphadenopathy</li> <li>• Nausea, vomiting</li> <li>• Irritability</li> <li>• Headache</li> <li>• Fatigue, malaise, somnolence</li> <li>• Arthralgia, myalgia</li> <li>• Pruritus</li> <li>• Cough, rhinitis, and pharyngitis</li> </ul> <p><b>Rare:</b></p> <ul style="list-style-type: none"> <li>• Anaphylaxis</li> <li>• Urticaria</li> <li>• Abdominal pain, diarrhea</li> <li>• Conjunctivitis</li> <li>• Febrile seizures</li> <li>• As with any immunization, unexpected or unusual side effects can occur. Refer to the product monograph for more detailed information.</li> </ul> <p><b>Post-immunization varicella-like rash:</b></p> <ul style="list-style-type: none"> <li>• Transmission from post-varicella rash to susceptible individuals is rare. Health care workers who develop a rash post-immunization should be individually evaluated. Generally, if the post-vaccine rash at the injection site can be covered, the individual can continue to work. Those with varicella-like rash not confined to the injection site should be excluded from work in high-risk patient care areas (e.g., where there are premature infants and immunocompromised patients) until the lesions are crusted.</li> </ul>	
<b>Pregnancy</b>	Live vaccines are contraindicated in pregnant women. Women of child-bearing potential should be advised to avoid pregnancy for at least 1 month following immunization.	
<b>Lactation</b>	<ul style="list-style-type: none"> <li>• It is not known whether varicella vaccine virus is secreted in human milk.</li> <li>• Can be administered to eligible breastfeeding women.</li> <li>• If post-immunization rash develops, breastfeeding should not be discontinued. The rash should be covered if possible.</li> </ul>	
<b>Composition</b>	<p><b>Each dose of 0.5 mL reconstituted vaccine contains:</b></p> <ul style="list-style-type: none"> <li>• Not less than 10<sup>3.3</sup> PFU (plaque-forming units) of varicella-zoster virus</li> <li>• Amino acids</li> <li>• Human albumin</li> <li>• Lactose</li> <li>• Neomycin sulphate</li> <li>• Polyalcohols</li> <li>• Sterile water for injection (diluent)</li> </ul>	<p><b>Each 0.5 mL dose of reconstituted vaccine contains:</b></p> <ul style="list-style-type: none"> <li>• A minimum of 1,350 PFU (plaque forming units) of Oka/Merck varicella virus</li> <li>• 18 mg sucrose</li> <li>• 8.9 mg hydrolyzed gelatin</li> <li>• 3.6 mg urea</li> <li>• 2.3 mg sodium chloride</li> <li>• 0.36 mg monosodium L-glutamate</li> <li>• 0.33 mg sodium phosphate dibasic</li> </ul>

	<b>Varilrix® (Not Currently Available)</b>	<b>Varivax® III</b>
		<ul style="list-style-type: none"> <li>• 57 mcg potassium phosphate monobasic</li> <li>• 57 mcg potassium chloride</li> <li>• Sterile water for injection (diluent)</li> </ul> Residual amounts of: <ul style="list-style-type: none"> <li>• MRC-5 cells (DNA and protein)</li> <li>• Neomycin</li> <li>• Fetal bovine serum from MRC-5 culture media</li> </ul>
<b>Blood/Blood Products</b>	Contains human albumin as an excipient (1 mg/dose).	Does not contain blood/blood products however the varicella virus is grown in MRC-5 human diploid cell culture.
<b>Bovine/Porcine Products</b>	<ul style="list-style-type: none"> <li>• Bovine materials are used early in the manufacturing process but are not present in the final product.</li> <li>• No porcine products are used in the development of this vaccine.</li> </ul>	<ul style="list-style-type: none"> <li>• Contains trace quantities of fetal bovine serum from MRC-5 culture media.</li> <li>• Contains porcine products.</li> </ul>
<b>Latex</b>	Does not contain latex.	
<b>Interchangeability</b>	Vaccines may be used interchangeably provided the appropriate dose and schedule recommended by the manufacturer are used.	
<b>Administration with Other Products</b>	<ul style="list-style-type: none"> <li>• Varicella vaccine can be administered simultaneously with other live vaccines or separated by an interval of at least 4 weeks. See schedule section for recommended intervals between all measles, mumps, rubella and varicella vaccines.</li> <li>• Varicella vaccine can be administered at the same time as other inactivated or live vaccines using a separate needle and syringe for each vaccine.</li> <li>• SHINGRIX® can be administered a minimum of 8 weeks after live varicella vaccine.</li> <li>• The same limb may be used if necessary, but different sites on the limb must be chosen.</li> <li>• Immune globulins (IG) and antibody-containing blood products cannot be given concurrently with live vaccines and must be separated by specified time frames depending upon the dosage and the biological. Varicella vaccine should be given at least 14 days prior to administration of an IG preparation or blood product or delayed until the antibodies in the IG preparation or blood product have degraded. If the interval between administration of vaccine and subsequent administration of an IG preparation or blood product is less than 14 days, the vaccine dose should be repeated after the recommended interval. See Recommended Schedules Standard for Guidelines for Interval Between Immune Globulin and other Blood Products and Live Vaccines.</li> <li>• Tuberculin skin tests should be given either before or at the same time as varicella vaccine; otherwise, the tuberculin skin test should be delayed for 4 weeks following varicella vaccine.</li> </ul>	
<b>Appearance</b>	<ul style="list-style-type: none"> <li>• Slightly creamy to yellowish- or pinkish-coloured powder.</li> <li>• Once reconstituted, the liquid may vary from clear peach to pink-coloured solution.</li> </ul>	<ul style="list-style-type: none"> <li>• Reconstituted vaccine is clear, colourless to pale yellow liquid.</li> </ul>
<b>Storage</b>	<ul style="list-style-type: none"> <li>• Store at +2°C to +8°C</li> <li>• Must be protected from light</li> <li>• Do not freeze</li> <li>• Do not use beyond the labeled expiry date</li> </ul>	

	<b>Varilrix® (Not Currently Available)</b>	<b>Varivax® III</b>
	<ul style="list-style-type: none"> <li>Diluent may be stored at room temperature</li> <li>Reconstituted vaccine should be used as soon as possible (Vaccine is unstable and begins to deteriorate as soon as reconstituted)</li> </ul>	
<b>Vaccine Code</b>	VZ	
<b>Antigen Code</b>	VZ	
<b>Licensed Use</b>	<ul style="list-style-type: none"> <li>All individuals 12 months of age and older as per the indications section</li> </ul>	<ul style="list-style-type: none"> <li>All individuals 12 months of age and older as per the indications section</li> </ul>
<b>Off-License Use</b>	<ul style="list-style-type: none"> <li>Children starting at 6 months of age to less than 12 months of age expecting solid organ transplant</li> </ul>	<ul style="list-style-type: none"> <li>Children less than 12 months of age expecting solid organ transplant.</li> <li>Second dose for children 4 to 6 years of age and susceptible adults with HIV meeting clinical criteria</li> </ul>
<b>Program Notes:</b>		
<ul style="list-style-type: none"> <li>2001 March: Varicella vaccine was made available to non-immune special groups (household contacts of immunocompromised individuals, health care workers known to be susceptible, and women identified through routine pre-natal care).</li> <li>2001 April: A catch-up program was offered in the grade 5 school immunization program.</li> <li>2001 July 1: Varicella vaccine was introduced into the 12 month routine childhood immunization visit for all individuals born on or after January 1, 2000.</li> <li>2002 Spring: A catch-up program was offered during the preschool immunization visit.</li> <li>2003 April: All other susceptible individuals in Alberta became eligible to receive the varicella vaccine.</li> <li>2012 August 1: All children born on or after August 1, 2005 became eligible to receive 2 doses of varicella vaccine. With 2 doses of MMR vaccine and 2 doses of varicella vaccine recommended in the routine schedule as of August 1, 2012, MMR-Var became the vaccine of choice at the 12 month and 4 to 6 year immunization appointments.</li> <li>2018 September 1: Children born August 1, 2012 or later with a verbal history of chicken pox disease became eligible to receive varicella vaccine as they present in child health clinic. Additionally, women identified through prenatal screening and HCWs became eligible to receive varicella vaccine regardless of disease history to a maximum of two doses.</li> <li>2021 January 1: Varicella second dose offered at 18 months instead of 4 years of age.</li> <li>2022 April 25: Included Ukrainian evacuees 13 years of age and older under exception for serology requirement to determine susceptibility.</li> <li>2023 August 28: Removal of Varilrix® as product no longer available in Alberta. Included expert advice allowing off-license use of VARIVAX® III in children with acute lymphocytic leukemia (ALL) and persons receiving other immunosuppressive treatment.</li> </ul>
